		CORNER CODE

(B) Describe any record evidence, monument evidence, occupational evidence, testimonial evidence or any other material evidence you considered, and whether the monument was found or placed.

Following highway reconstruction, set 3/4 inch rebar with yellow cap about twenty four feet north of the edge of pavement of the northerly side of Townline Road, which has been perpetuated from locating a previously existing cut limestone monument prior to construction as found by Donald Barnes, Rock County Surveyor, in May of 2012 as marking the location of the corner. Found one 3/8 inch rebar, set one magnetic nails in the side of power poles, and set two magnetic nails in the pavement shoulder as witnesses following highway reconstruction as shown.

C) Was the corner restored through acceptance of (1) an obliterated evidence location, or, (2) a found perpetuated location?

Found perpetuated location.

D) Describe any material discrepancy between the location of the corner as restored or reestablished and the location of that corner as previously restored or reestablished by distance and direction. Show the discrepancy on the plan view drawing under (a), above. Show the distances between the corner as previously restored or reestablished and (1) the corner as restored or reestablished, and (2) to at least 4 of the witness monuments shown on the drawing in (a), above.

None.

(E) Was the corner reestablished through lost corner proportionate methods? If so, show the method, including the directions and distances to other public land survey corners used as evidence or used for proportioning the corner location.

No.

I, Kristin Belongia, RLS, hereby certify that the corner location as identified by the corner code index was determined by me under my direction and control and that this U.S. Public Land Survey Monument Record is correct and complete to the best of my knowledge and belief.
